Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ō DNA sequence coding for oncofetal ferritin 1 protein, useful for immunizations against breast cancer, for enhancing fertilization rates during in vitro fertilization treatment and for use as a growth factor bone-marrow progenitor cells.

Example 7; Fig 7; 66pp; English.

The present sequence represents a cDNA clone designated T16 for coding

420 540 oncofetal ferritin 1 (OFF1) protein. OFF1 has cytostatic, immunosuppressive, contraceptive, abortive and nootropic activities, and can be used as a vaccine. Compositions comprising the expression vector containing an OFF1 coding sequence, and the OFF1 protein, are useful: (a) for immunisations against cancer, especially breast cancer; (b) in the treatment of transplant rejections, autoimmune diseases, pathological pregnancies; (c) for enhancing fertilisation rates during in vitro fertilisation (IVF) treatment; and (d) for use as a growth factor of bone marrow progenitor cells such as granulocyte monocytes. The OFF1 cancer, heptablastoma, leukaemia, Hodgkin's and non-Hodgkin's lymphomas and embryonal tumours, Down's Syndrome, and pathological pregnancies such as spontaneous abortion and miscarriage, premature contractions, toxaemia 420 480 540 900 900 999 9 720 300 360 360 480 CTAATTGGAAGCGCCACCCTAGCAATATCAACCATTAACCTTCCCTCTACACTTATCATC 780 TAATGCACACTCCATTGCATTCAGCCCGCCTCTCCTTAGTCGCCGCCATGACGACCGCGT 120 TAATGCACACTCCATTGCATTCAGCCCGCTCTCCTTAGTCGCCGCCATGACGACGACGCGT 120 CCACCTCGCAGGTGCGCCAGAACTACCACCAGGACTCAGAGGCCGCCATCAACCGCCAGA 180 CCACCTCGCAGGTGCGCCAGAACTACCACCAGGACTCAGAGGCCGCCATCAACCGCCAGA 180 240 300 1 TTGACACCAGACCAACTGGTAATGGTAGCGACCGGCGCTCAGCTGGAATTCCAAAAATG 60 treacaccagaccaacregraaregragegaccegecercageregaarrecaaaaare 60 241 ATGATGTGGCTTTGAAGAACTTTGCCAAATACTTTCTTCACCAATCTCATGAGGAGGGGG GACCCCGCCGGAGGAAGAGACCCCATTCTATACCAACACCTATTCTGATTTTTCGGTCAC TACTCCGGAAATCGCTGTCGCCTAACCGCTAACATTACTGCAGGCCACCTACTCATGCAC TCAACCTGGAGCTCTACGCCTCCTACGTTTACCTGTCCATGTCTTACTACTTTGACCGCG ATGATGTGGCTTTTGAAGAACTTTTGCCAAATACTTTCTTCACCAATCTCATGAGGAGAGGG ATATCAAGAAACCAGACTGTGATGACTGGGAGAGCGGGCTGAATGCAATGGAGTGTGCAT TACATTTGGAAAAAATGTGAATCAGTCACTACTGGAATTCCCTTCTCCTATCTCCCCA GTCCTAGCTGCTGCCATCACTATACTAACAGACCGCAACCTCAACACCACCTTCTTC 541 GACCCCGCCGGAGGAGACCCCATTCTATACCAACACCTATTCTGATTTTTCGGTCAC CCTGAAGTTTATATTCTTATCCTACCAGGCTTCGGAATAATCTCCCATATTGTAACTTAC 601 cergaagiriararierrarecraeceaegerreegaaraarereecararieraacriae ö Length 891; Sequence 891 BP; 246 A; 268 C; 158 G; 219 T; 0 U; 0 Other; 0; Indels 100.0%; Score 891; DB 3; L 100.0%; Pred. ```

The present sequence represents a cDNA clone designated T16 for coding oncofectal ferritin 1 (OPF1) protein. OFF1 has cytostatic, immunosuppressive, contraceptive, abortive and nootropic activities, and can be used as a vaccine. Compositions comprising the expression vector. Containing an OFF1 coding sequence, and the OFF1 protein, are useful: (a) for immunisations against cancer, especially breast cancer; (b) in the treatment of transplant rejections, auclimanted diseases, pathological pregnancies; (c) for enhancing fertilisation rates during in vitro fertilisation (IVF) treatment; and (d) for use as a growth factor of bone—marrow progenitor cells such as granulocyte monocytes. The OFF1 nucleotide sequence is useful for diagnosing cancer such as breast cancer, heptablastoma, leukaemia, Hodgkin's and non-Hodgkin's lymphomas and embryonal tumours, Down's Syndrome, and pathological pregnancies such as spontaneous abortion and miscarriage, premature contractions, toxaemia (a contractions, toxaemia premature delivery

The present sequence encodes the human oncofetal ferritin 1 (OFF1) protein. OFF1 has cytostatic, immunosuppressive, contraceptive, abortive protein. OFF1 has cytostatic, immunosuppressive, contraceptive, abortive and nootropic activities, and can be used as a vaccine. Compositions comprising the expression vector containing an OFF1 coding sequence, and the OFF1 protein, are useful: (a) for immunisations against cancer, appropriate cancer, (b) in the treatment of transplant rejections, autoimmune diseases, pathological pregnancies; (c) for enhancing cutoimmune diseases, pathological pregnancies; (c) for enhancing of fertilisation rates during in vitro fertilisation (IVF) treatment; and (d) for use as a growth factor of bone-marrow progenitor cells such as granulocyte monocytes. The OFF1 nucleotide sequence is useful for diagnosing cancer such as breast cancer, heptablastoma, leukaemia, Hodgkin's and non-Hoddkin's lymphomas and embryonal tumours, Down's Syndrome, and pathological pregnancies such as spontaneous abortion and miscarriage, premature contractions, toxaemia or premature delivery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TAATGCACACTCCATTGCATTCAGCCCGCCTCTCCTTAGTCGCCGCCATGACGACGGCGT 120
                                                                                                                                        DNA sequence coding for oncofetal ferritin 1 protein, useful for immunizatons against breast cancer, for enhancing fertilization rates during in vitro fertilization treatment and for use as a growth factor of bone-marrow progenitor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CCACCTCGCAGGTGCGCCAGAACTACCACCAGGACTCAGAGGCCGCCATCAACCGCCAGA

The invention relates to isolated polynucleotides (I) encoding colon tumour polypeptides (II). (I) is useful for stimulating an immune response in a patient and treating colon cancer in a patient.
Oligonucleotides derived from (I) are useful in patient.
of cancer in a patient. (I) and (II) are useful in pharmaceutical compositions, e.g. vaccines, and other compositions for the diagnosis and treatment of colon cancer. A composition comprising a first component selected from physiologically acceptable carriers and immunostimulants, and an antigen-presenting cell expressing (II) is useful for inhibiting development of cancer in a patient. (I) is useful in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and (I). ABKS4531-ABKS5464 represent human colon cancer cDNA sequences of the invention

18043 CDNA sequences, appearing as ACH12799-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymolectide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (BST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense by sequences. Note: The sequence data is on this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 6422 nucleotide eagled (CC as); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% (a) eaguence is described; (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide (comprising; (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-capth oding region of the above nucleotide sequences; or (c) a sequence comprising; (a) an amino acid sequence encoded by the full-capthing at least 80% identical (a) (a) an encoded by any of the above nucleotide sequences; or (c) a sequence an isolated antibody that binds to the above polypeptide; (6) a chimeric polypeptide; (6) an isolated oligopeptide; (1) a process or producing the antibody that binds to the above polypeptide; (1) a nisolated oligopeptide; (1) a nisolated oligopeptide; (1) a nisolated oligopeptide; (1) a process or producing the antibody; (8) an isolated oligopeptide; (1) a composition of matter comprising the above (chimeric) polypeptide; (1) an article of manufacture comprising a container and cartibody, oligopeptide of manufacture comprising a container and container in the growth of the cell that expresses the above protein, where the growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth or described above; (15) a method of diagnosing the presence of a protein and associated of containing the protein of acciding an ammal, (10) a method of binding an antibody, oligopeptide or creating a manual, and can be used in gene contained above; (15) an enthod of binding an antibody, oligopeptide to a cell that expresses the protein described above; (15) are the above protein; and can be above and cartivity of the above confinence of a pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a human TAT CDNA sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CGTTTACCTGTCCATGTCTTACTACTTTGACCGCGATGATGTGGCTTTGAAGAACTTTGC 265

target (TAT) nucleic acid comprising; (a) any of 4622 nucleotide sequences (see SEQ ID No.1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% equence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-length ocding region of the above nucleotide sequences; or (c) a sequence comprising the above polypeptide fused to a heterologous polypeptide; (f) an isolated antibody; that binds to the above polypeptide; (7) a process for producing the antibody; (8) an isolated antigenic target (TAT) binding organic molecule that binds to the above polypeptide; (10) a

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) a (b); (d) a sequence that has 80% sequence identify to (a) -(c); or (e) a sequence that hybridises to (a) -(c). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-comprising the above polypeptide; (b) a manino acid sequence encoded by the full-comprising the above polypeptide fused to a heterologous polypeptide; (c) a comprising the above polypeptide fused to a heterologous polypeptide; (c) a process or isolated antibody that binds to the above polypeptide; (f) a process or isolated antipody that binds to the above polypeptide; (f) a comprising the above polypeptide; (9) a tumour-associated antignoic target (TAT) composition of matter comprising the above polypeptide; (10) a nation of matter comprising the above polypeptide; (11) an article of manufacture comprising a container; (12) methods of composition of matter contained within the container; (12) methods of containing the protein; (13) a method of a cell that expresses the above protein; where the growth of the cell that expresses the above protein; (12) methods of diagnosing the presence of a tumour in described above; (15) methods of diagnosing the presence of a protein and sample suspected of containing the protein; and (17) a method of diagnosing the presence of a tumour in described above; (15) methods of diagnosing the presence of a tumour in a sample suspecse the presence of a containing the protein; and (17) a method of diagnosing the presence of a tumour in disorder associated with increased expresses the above present the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ng or treating cancer. The composition is also used for preparing ment for the therapeutic treatment or diagnostic detection of a liferative disorder or cancer. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        66
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CCGCCTCTCCTTAGTCGCCGCCATGACGACCGCGTCCACCTCGCAGGTGCGCCAGAACTA

                                                                                                                                                                                                                                    340 creseacacececercaarecaarecacresecarracarrecaaraaaaarecaaaaa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides, expression vectors and host cells comprising a TAT nucleic acid, an antibody specific for a TAT polypeptide; fusion proteins comprising a TAT polypeptide, and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,

antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, ovarian cancer, cancers of the central used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence represents a TAT nucleic acid of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; shear stress-response protein; vascular disease; arteriosclerosis;

                                                                                                                                     The present invention provides the protein and coding sequences of a number of human shear stress response proteins. These are useful in diagnosis, treatment and screening of vascular diseases caused by arteriosclerosis, including heart failure, post-PTCA restenosis and hypertension

The invention relates to a novel isolated nuclea and the PRO antihiflammatory, antiarthritic, antihenumatic, immunosuppressive, costeopathic, antidiabetic, dermatological, antipsoriatic, antiallergic, antidiabetic, dermatological, antipsoriatic, antiallergic, antidiabetic, dermatological, antipsoriatic, antiallergic, antidiabetic, dermatological, antipsoriatic, antiallergic, antidathator, and specifically binds to the coff the invention may have a use in gene therapy. The PRO polypoptide, its agonist, antigatomist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic arthritis, associated is useful for treating an immune related disorder such as systemic arthritis, associated is associated why Siogram's syntome, systemic selerosis, an idiopathic inflammatory myopathy, Siogram's syntome, systemic selerosis, antidiomatic appropriation properties and inflammatory disease of the central or peripheral nervous cystem, idiopathic demyelinating polyneuropathy, duillain-Barre syndrome, system, idiopathic demyelinating polyneuropathy, a hepatobiliary disease, infectious or autoimmune chronic active hepatitis, primary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, whipple's circlisease, an autoimmune or immune-mediated skin disease, abullous skin disease, asthma, allergic rhinitis, atopic dermatitis, food hypersensitivity, urticaria, an immunologic disease, graft rejection or consenses inventions, idiopathic pulmonary fibrosis, yrejection or consense in a symman and issease, an autoimmune and immunologic disease, graft rejection or consenses in a minumonary fibrosis, hypersensitivity, in the present sequence encodes a PRO protein of the incompliance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CCACCAGGACTCAGAGGCCGCCATCAACCGCCAGATCAACCTGGAGCTCTACGCCTCCTA 189

                                                                                                                                                                                                                                                                                                                                            The invention comprises a method for diagnosing colon cancer in an individual, the method involves obtaining a serum sample from the individual and detecting the presence of either TIMP1 or Regl-alpha an additional colorectal cancer-associated marker. The method of the invention is useful for diagnosing colon cancer in an individual. The present DNA sequence represents a human colorectal cancer-associated protein coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CCACCAGGACTCAGAGGCCGCCATCAACGGCAGATCAACCTGGAGCTCTAGGCTCTA

The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid molecule comprising a nucleotide sequence (SI). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful a marker for breast cancer and in breast cancer therapy. Sequences given in records ACN78851-ACN29314 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web

Sequences AAH23071-23152 represent nucleic acid sequences derived from osteoarthritis tissues. The sequences are useful as probes and for the diagnosis or prognosis of mammalian osteoarthritis. The polynucleotides and polypeptides of the invention are useful for generating diagnostic reagents, as targets for small molecule drug development, generation of therapeutics, and cloning genes. Specific antibodies are used to generate enzyme linked immunosorbent assays for detection of osteoarthritis. The invented molecules can be used to treat osteoarthritis or to analyse the disease-modifying activity of osteoarthritis drugs. Other disorders treatable using the nucleic acid sequences include atopic, inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ostecarthritis; infectious disorder; Crohn's disease; sepsis; human; wound healing; ostecpathic; anti-arthritic, anti-inflammatory; vulnerary; antibacterial; antiallergic; ds.
